**Dr Lancelot MARIQUE** 

Liver and Pancreas Unit

Liver Transplant

# Abdominal Transplant and Surgery Department

Cliniques Universitaires Saint-Luc

### **EPIDEMIOLOGY**

### GALLSTONE DISEASE = major health problem

1 to 4% of the Western world population every year

10% to 15% during their lifetime

3F: 1M ratio

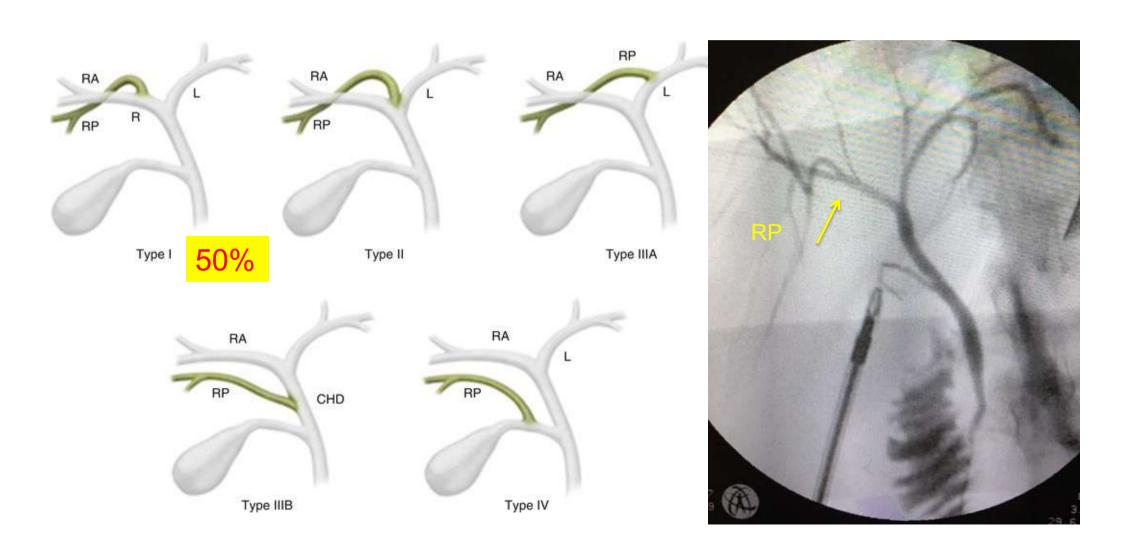

#### **CHOLECYSTECTOMY:**

Mean : **24.000 / year** (RIZIV /INAMI)

=> Every (young) surgeon will have to deal with (difficult) cases

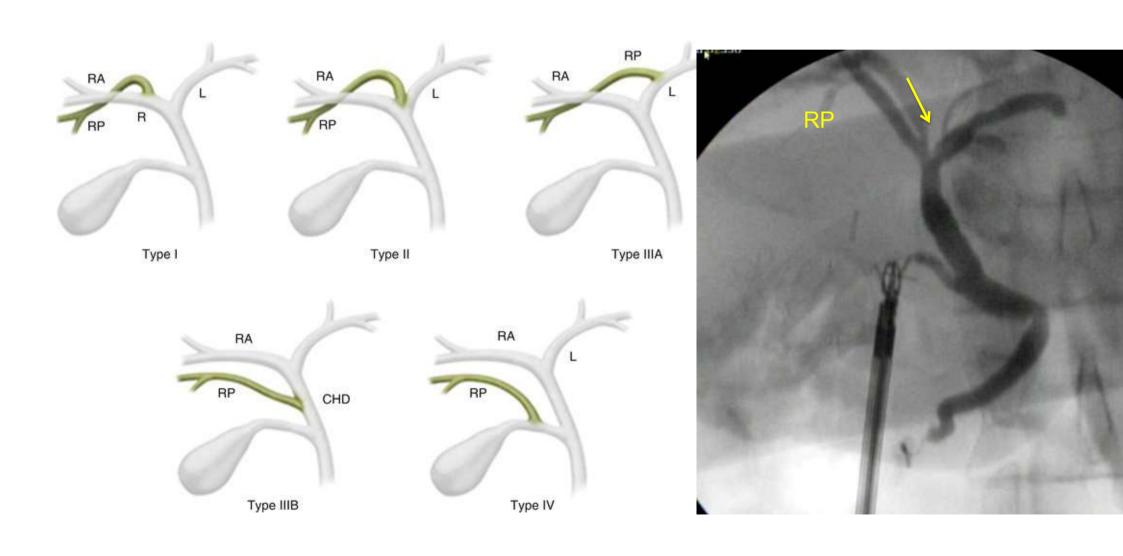

#### **BILIARY VARIATIONS: TYPE I**

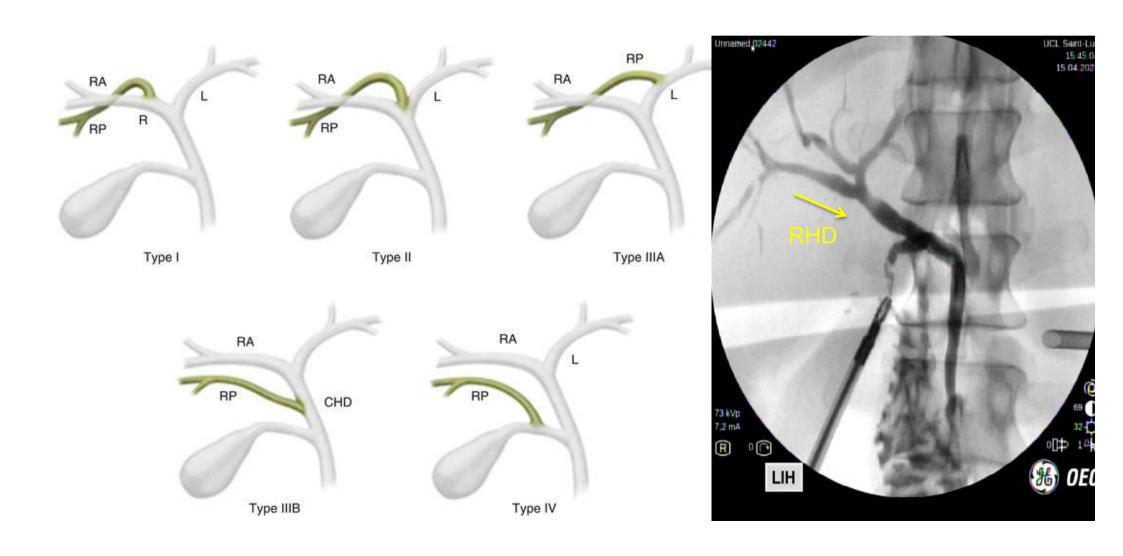

#### **BILIARY VARIATIONS: TYPE II**

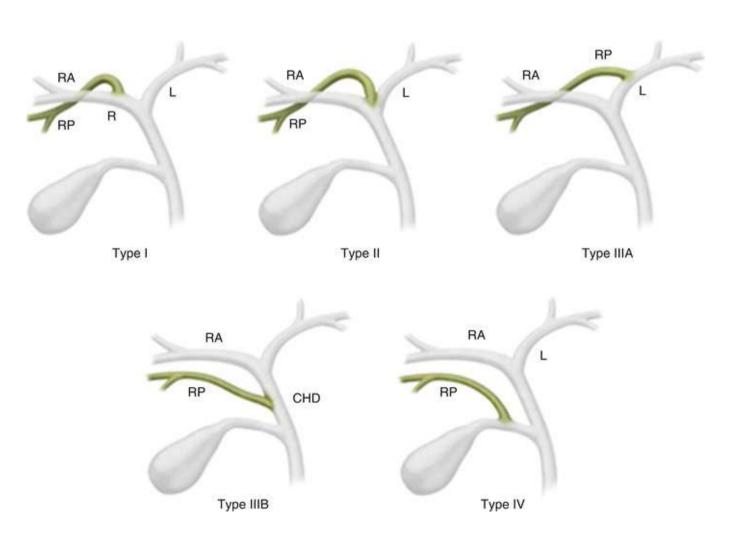

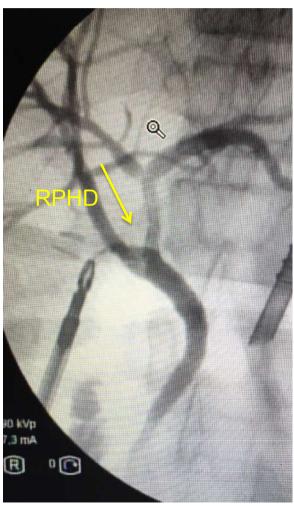

#### **BILIARY VARIATIONS: TYPE IIIB**

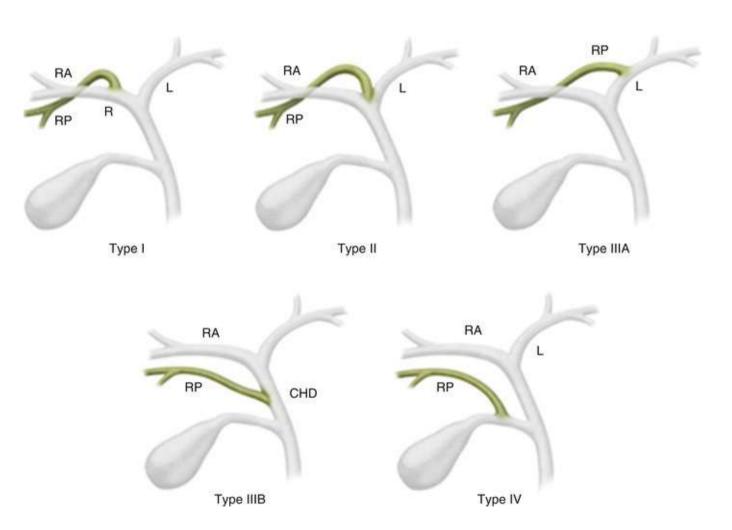

#### **BILIARY VARIATIONS: TYPE IIIB**

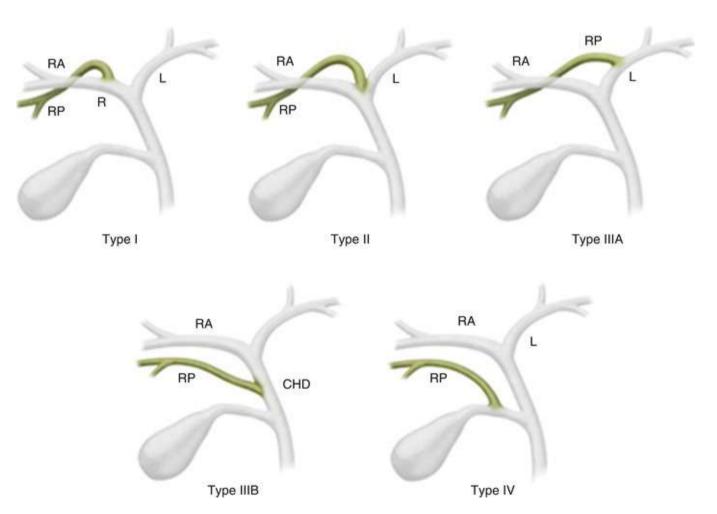

#### **BILIARY VARIATIONS: TYPE IIIB**

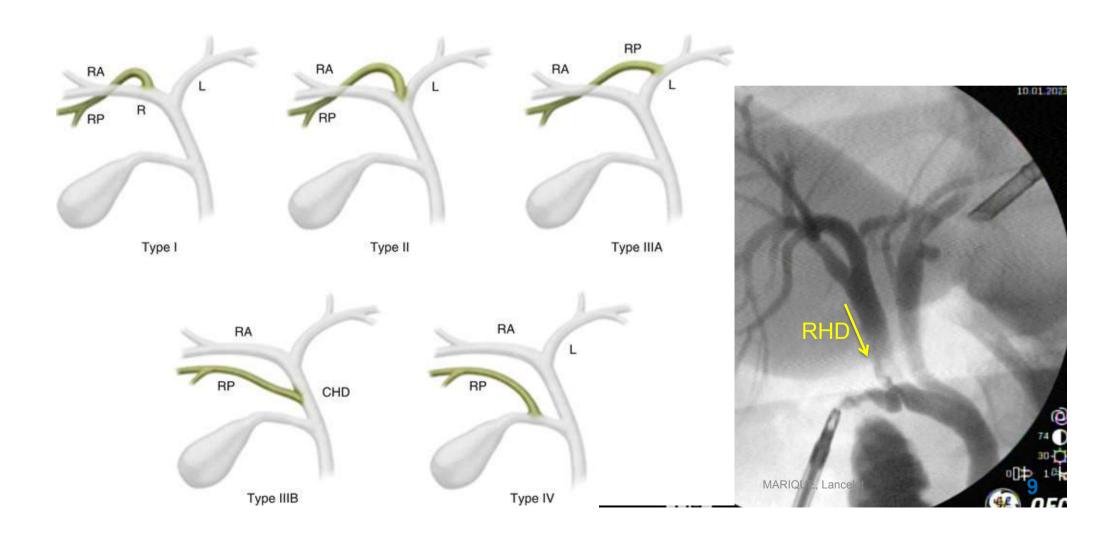

#### **BILIARY VARIATIONS: TYPE IV**

#### **BILIARY VARIATIONS: TYPE IV**

# LAPAROSCOPIC CHOLECYSTECTOMY

#### = GOLD STANDARD

#### 1993 NIH CONSENSUS CONFERENCE

- Decrease in postoperative pain
- Reduced LOS
- Faster return to work
- Similar morbi-mortality
- Similar Costs

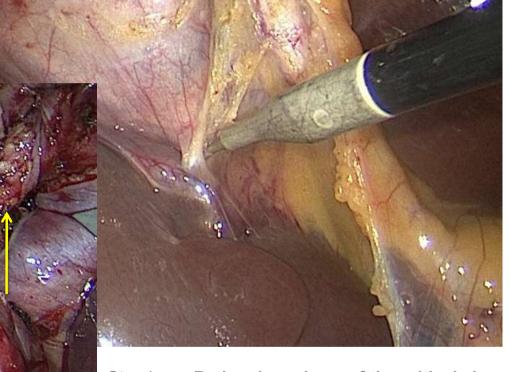

#### INCREASED RISK OF BILIAIRY DUCT INJURY

# Gallstones and Laparoscopic Cholecystectomy

NIH Consensus Development Panel on Gallstones and Laparoscopic Cholecystectomy

# **SAFE OPERATIVE MANAGEMENT**

**30° VIEW LAPAROSCOPE KEEP LEFT CRITICAL VIEW OF SAFETY** 

Strasberg, Rationale and use of the critical view of safety in laparoscopic cholecystectomy. J Am Coll Surg 2010.

Strasberg, An analysis of the problem of biliary injury during laparoscopic cholecystectomy. J Am Coll Surg, 1995

# **DIFFICULT CONDITIONS**

#### Procedure with an increased surgical risk compared with standard cholecystectomy

- Incidence of 16% in large series
- Severe inflammation, local anatomy distortion and difficult dissections

#### **Local Conditions**

	Gall-bladder	Cystic pedicle	Adhesions
Grade I	Floppy, non-adherent	Clear, thin	Simple, to neck and Hartman's pouch
Grade II	Mucocele	Fat-laden	Simple, up to the body
	Packed with stones		
Grade III	Deep fossa	Abnormal anatomy	Dense, up to the fundus
	Acute cholecystitis	Cystic duct short, dilated	Involving hepatic flexure
	Contracted, fibrous	or obscured	or duodenum
	Hartman's pouch adherent		
	to CBD or with stone		

### **Patient's Conditions**

**Previous surgery.ies** 

Obesity

Risk of bleeding

Cirrhosis Anticoagulation

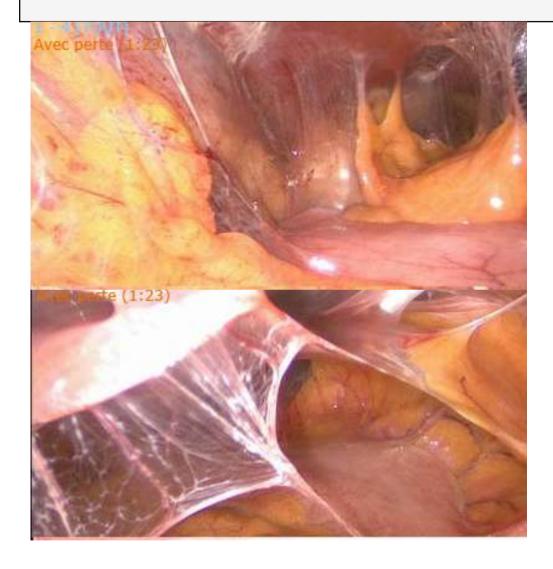

### EVERY SITUATION in which CVS can not be SAFELY achieved

Mass

Duodenum or hepatic flexure difficult to separate

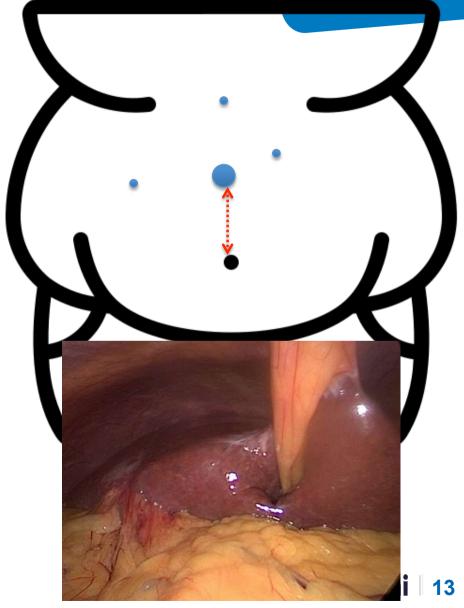

Left-sided gallbladder

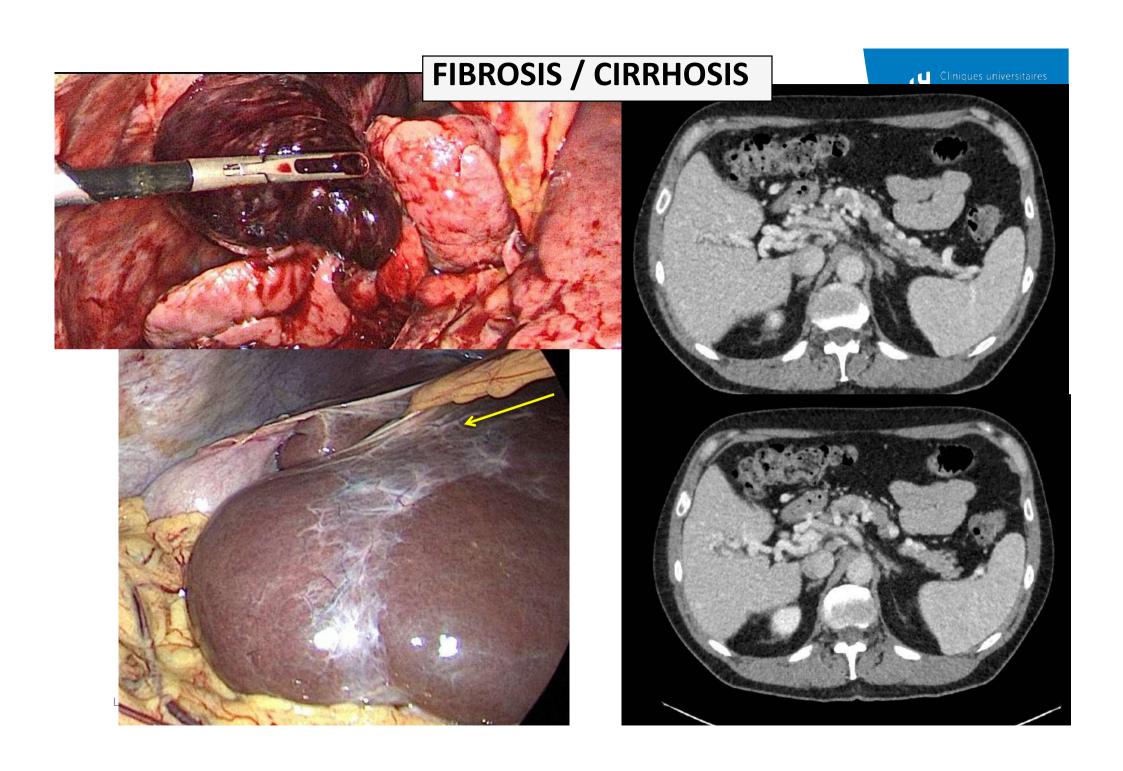

### PREVIOUS UPPER ABDOMINAL SURGERIES

#### **ACUTE CHOLECYSTITIS**

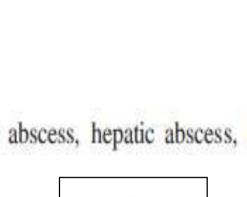

Grade II (moderate) acute cholecystitis

"Grade II" acute cholecystitis is associated with any one of the following conditions:

- 1. Elevated WBC count (>18,000/mm<sup>3</sup>)
- 2. Palpable tender mass in the right upper abdominal quadrant
- 3. Duration of complaints >72 ha
- Marked local inflammation (gangrenous cholecystitis, pericholecystic abscess, hepatic abscess, biliary pericholecystitis)

Tokyo Guidelines 2018: diagnostic criteria and severity grading of acute cholecystitis (with videos)

#### **ACUTE CHOLECYSTITIS**

Grade III (severe) acute cholecystitis

"Grade III" acute cholecystitis is associated with dysfunction of any one of the following organs/systems:

- 1. Cardiovascular dysfunction: hypotension requiring treatment with dopamine ≥5 µg/kg per min, or any dose of norepinephrine
- 2. Neurological dysfunction: decreased level of consciousness
- 3. Respiratory dysfunction: PaO<sub>2</sub>/FiO<sub>2</sub> ratio <300
- Renal dysfunction: oliguria, creatinine >2.0 mg/dl
- 5. Hepatic dysfunction: PT-INR >1.5
- Hematological dysfunction: platelet count <100,000/mm<sup>3</sup>
